I have this code that generates a investment summary and some analytic images

```
def investment_summary(pdf, text, bullet_indent=15):
    pdf.set_font('Arial', size=8)

    for point in text.splitlines():
        if point.startswith("-"):
            pdf.set_x(bullet_indent)
            pdf.multi_cell(0, 5, point)

def add_analytics(pdf, image_paths):
    for image in image_paths:
        pdf.image(image, w=100, h=100) # Adjust width (w) and height (h) as needed
        pdf.add_page() # Start a new page for each graph

def create_report(county_and_state, llm_text, analytics_location_path=None):

    pdf = FPDF()
    pdf.add_page()

    pdf.set_text_color(r=50, g=100, b=175)
    pdf.set_font('Arial', 'B', 10)

    pdf.cell(w=0, h=10, txt="Verus-AI: " + county_and_state, ln=1, align='C')
```
